

The World Tomorrow

RADIO/TV GUIDE

OUR PARADOXICAL WORLD

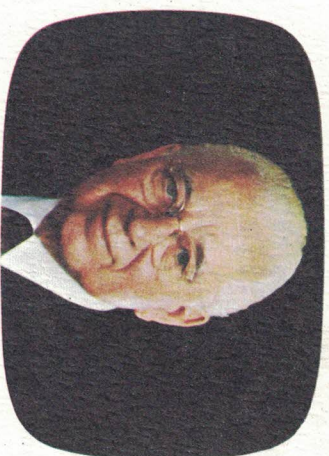

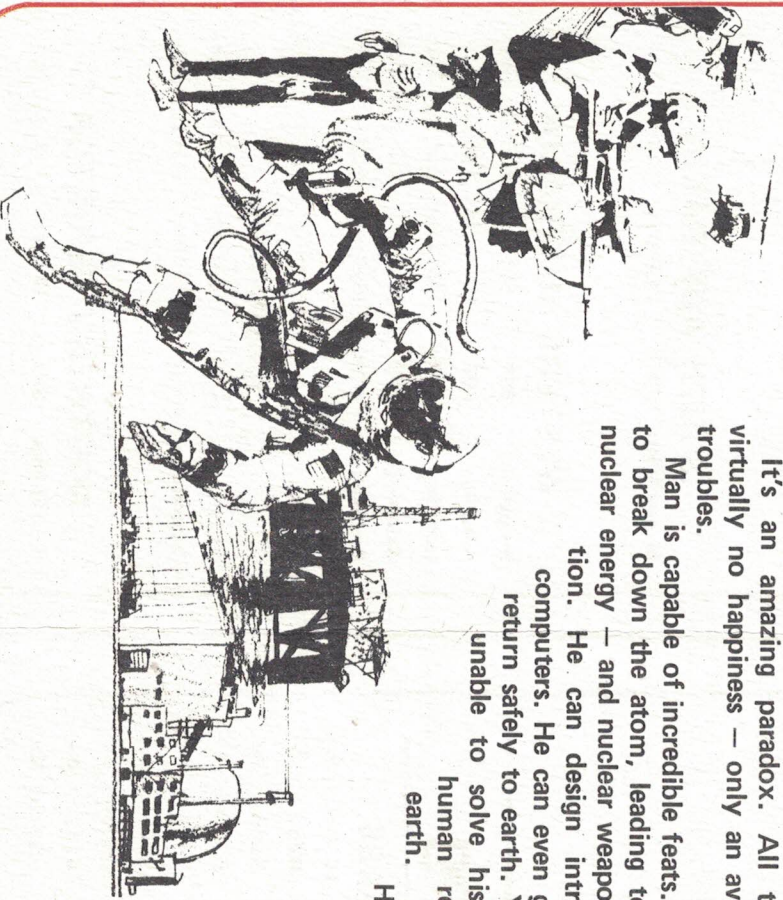

Today's world is being threatened with shortages of all its major resources — all of them except knowledge. Man's knowledge has actually doubled, but the number of troubles has accelerated just as rapidly.

The world has experienced an alarming increase in food shortages, poverty, unhappiness, crime, global pollution and impending threat of war.

It's an amazing paradox. All this knowledge, yet virtually no happiness — only an avalanche of unending troubles.

Man is capable of incredible feats. He has learned how to break down the atom, leading to the production of nuclear energy — and nuclear weapons for mass destruction. He can design intricate and fantastic computers. He can even go to the moon and return safely to earth. Yet he finds himself unable to solve his own problems of human relationship here on earth.

Herbert W. Armstrong reveals why on The World Tomorrow radio and television programme. Tune in to the station nearest you.

**HERBERT W.
ARMSTRONG**

speaks on

TODAY'S WORLD CONDITIONS

... WHERE THEY ARE
LEADING AND WHY

Tune in to a half-hour of sparkling dynamic commentary on the vital issues affecting mankind. Herbert Armstrong analyzes today's world trends and authoritatively points to some surprising answers to life's most perplexing questions.
